Aims & Scope (with date):

IFIP Technical Committee 11 (TC 11) focuses on information security and privacy, addressing the challenges and advancements in this rapidly evolving field. The primary aim of TC 11 is to foster international cooperation among researchers, practitioners, and academics by promoting research, development, and practical application of security and privacy technologies. It provides a platform for the exchange of knowledge, experiences, and best practices to improve the security of information systems globally.

TC 11's scope includes various domains of information security such as cryptography, network security, data protection, and privacy-enhancing technologies. It also covers topics like security management, security in emerging technologies, identity management, and risk assessment. The committee encourages interdisciplinary approaches by integrating technical, legal, social, and economic aspects of security and privacy.

A key objective is the organization of conferences, workshops, and publication efforts, like the flagship IFIP SEC conference, to disseminate research findings and foster discussions on contemporary security issues. Through these activities, TC 11 aims to drive innovation and address real-world problems, influencing the future direction of global security standards and policies. Overall, it contributes to strengthening security practices in academia, industry, and governmental institutions.
